DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species	Claims	Figures
I	1-3, 12-14	1, 4
II	4, 6, 7, 14	6, 7
III	5, 8-11	8, 10, 11

During a telephone conversation with applicant's representative, Mr. Richard V. Burgujian (Reg. No. 31,744) on July 20, 2005 a provisional election was made **without traverse** to prosecute the invention of Group I, claims 1-3, 12-14. Affirmation of this election must be made by applicant in replying to this Office action. Claims 4-11 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Objections

Claim 14 is objected to because of the following informalities: claim 14 is depended on a non-elected claim. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 14 is depended on a non-elected claim (7). As such, it is unclear what "subsequent stage integrators" are intended.

Allowable Subject Matter

Claims 1-3, 12, 13 are allowed.

Claims 1-3, 12, 13 call for, among others, adding the second output signal from 3rd inverted amplifier (A3) and the fourth output signal from the 4th inverted amplifier (A4) to generate the estimated common-mode output signal (Voc).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Czarnul et al. (5,963,088); Hughes (6,680,627)) show further analogous prior art circuitry having plurality of inverters.
